Quality Manager

We certify that the slings listed above have been produced in accordance with the requirements of the above-mentioned standard.

DIRECTIONS FOR USE

Use only identified slings with a visible Safe Working Load (SWL).

Do not use damaged slings.

Use only a slip knot for a choker lift.

Do not use the sling on sharp-edged and rough surfaces without an additional protective sleeve.

Do not forcibly pull out a sling that is jammed under a load.

Take into account the lifting angles.

Do not use slings in temperatures above 100 degrees Celsius or below -40 degrees Celsius.

Before each use, the sling should be inspected for defects and to ensure that the identification and specification are correct.

A sling that is unidentified or defective should never be used and should be referred to a competent person for examination.

During the period of use, frequent checks should be made for defects or damage, including damage concealed by soiling, which might affect the continued safe use of the sling.

These checks should also extend to any fittings and lifting accessories used in association with the sling.

If any doubt exists as to the fitness for use, or if any of the required markings have been lost or become illegible, the sling should be removed from service for examination by a competent person.

Upon completion of the lifting operation, the sling should be returned to proper storage.

When not in use, slings should be stored in clean, dry, and well-ventilated conditions at ambient temperature on a rack, away from any heat sources, contact with chemicals, fumes, corrodible surfaces, direct sunlight, or other sources of ultraviolet radiation.

Avoid shock loading.
